

Guwerks Scope Mount Agreement, Test Target, and Instructions.

We are excited to give your rifle the Gunwerks long range treatment with the addition of a Huskemaw Optics 5-20 LR rifle scope. Please complete the steps outlined in this simple contract and send it in with your firearm along with a copy of your invoice. There are a few requirements to qualify your rifle because we want you to be very satisfied with the service that we are providing.

- 1) For best results, your gun should shoot reasonably well, we recommend 1.5" or less at 100 yards. We request that you shoot a group on this test target to document your accuracy.
- 2) The gun must be completely broken in, and shipped to us with a clean barrel. There is a service charge of \$50 to clean a badly fouled firearm.
- 3) You must supply 40 rounds of FACTORY loaded ammo. The same stuff you use to shoot your target. If you would like to try HSM or Gunwerks ammo, order a box of each and we will send it to your for accuracy testing. If you like it, record the ammo description and we can supply two boxes to shoot your data.

If you follow these guidelines, we can calibrate a custom turret that will have you shooting beyond a half mile! We will inspect your

firearm to ensure it is suitable and safe to shoot. We provide a set of Talley Rings and we properly mount the Huskemaw 5-20 on your rifle (Lapping, Leveling, Etc.). We take the rifle to our range and shoot the True BC data to build your custom turrets to match your ammo. We will build the turrets and take another trip to the range to zero and verify the function of the custom turrets.

We need you to remove all slings, bipods, scopes and mounts. Clean your rifle, and make it ready for us to shoot. Ship your rifle in a hard plastic case, inside a cardboard box using UPS or Fedex to the address listed below. In a separate package, ship 40 rounds of your FACTORY loaded ammunition to the same address. If you don't have factory ammo, call a customer service rep and we will help you out.
